

Financial Sustainability and Entrepreneurship Plan

Prepared by: Prince Ntare Kayitare
Cynthia Marie Nishimwe
Gurnaud Ishema

School: Rwanda Coding Academy

1. Introduction

Our plan outlines a **1,500,000 RWF financial recovery and sustainability strategy** for *Aline Mukamana, Eric Habimana, and Patrick Uwimana*.

It details their current situation, capital allocation across two new businesses, and a structured path to long-term income. Every cost, responsibility, and savings goal is fully defined to provide a clear, self-contained roadmap for their financial future.

2. Current Monthly Income

Source	Amount (RWF)
Parents Allowance	20,000
Weekend Work	25,000
Shop Assistant Job	15,000
Total Income	60,000

3. Current Monthly Expenses

Expense	Amount (RWF)
Transport	18,000

Lunch & Snacks	25,000
Entertainment & Data	30,000
Debt Repayment	7,000
Total	80,000

Budget Result: 60,000 - 80,000 = -20,000 RWF (monthly deficit)

4. Debt Situation

Person	Debt (RWF)
Aline	60,000
Eric	50,000
Patrick	40,000
Total	150,000

5 .Allocation of the 1,500,000 RWF Support

We thought of paying Debts immediately from the support money and also grabbing some 150,000Frw money from it and save it to be used if any issue arises maybe from the investment activities or our other personal needs if any arises.

Purpose	Amount (RWF)	Reason
Debt Repayment	150,000	Eliminate existing financial burden
Emergency Fund	150,000	Provide financial protection against unexpected events
Business Investment	1,200,000	Launch income-generating activities
Total	1,500,000	Full capital utilization

5. Business 1: Upcycled Jeans Bag Production and other clothes

We thought that if the group chose to collect second-hand jeans and transform them into reusable bags. They **will partner with a local tailor who owns a sewing machine and has tailoring experience**. The friends will supply all raw materials while the tailor provides sewing services and is paid per bag.

Materials for Production

Material	Cost (RWF)
Second-hand jeans	50,000
Zippers	15,000
Thread	5,000
Inner lining fabric	15,000
Handles/straps	10,000
Labels & decorations	10,000
Labels, Decorations & Packaging,	20,000
Marketing and Transport	40,000
Extra material reserver	50,000
Total Materials	205,000

Tailor Labour Cost

Item	Amount
Sewing cost per bag	3,500
Bags produced	40
Total labour cost	140,000

Total Production Cost: 205,000 RWF + 140,000RWF = 345,000RWF

Selling Price per Bag: 10,000 RWF

Revenue: $40 \times 10,000 = 400,000$ RWF

Profit per production cycle: $400,000 - 345,000 = 55,000$ RWF

(This profit is calculated before any minor additional expenses.)

7. Business 2: Black Soldier Fly Farming

Black Soldier Fly larvae are used as high-protein animal feed for poultry, fish, and pig farmers. The larvae feed on organic waste, which makes the production process environmentally sustainable.

Where shall be getting the Waste material

- **At the market they are mostly freely given**
- We could also consider **partnering with schools** to provide student left over foods to use in the process
Restaurants.

Startup Costs

Item	Cost (RWF)
Farm shed Construction	275,000
Starter larvae colony	8,000
Rearing trays (15)	120,000
Buckets and containers	30,000
Breeding cage structure	80,000
Waste collection transport	72,000
Drying Racks	50,000
Protective netting	15,000

Total Setup Cost	650,000
-------------------------	----------------

Monthly Production: 70 kg larvae

Selling Price: 2,500 RWF per kg

70kg * 2000Frw = 175,000RWF

The Operational Cost = 30,000Frw Expected

Revenue: 175,000 RWF	-	Operating Costs: 30,000 RWF
Monthly Profit: 145,000 RWF		

Expected Monthly Income After Businesses

Source	Amount (RWF)
Original Income	60,000
Jeans Bag Business	55,000
Black Soldier Fly Business	145,000
Total Monthly Income	260,000

9. New Monthly Budget

Category	Amount (RWF)
Transport	18,000
Lunch & Snacks	25,000
Entertainment & Data	10,000
Business Reinvestment	35,000
Emergency Savings	10,000

Future Stability Fund	30,000
Personal Buffer	7,000
Total Expenses	135,000

Monthly Surplus: 260,000 – 135,000 = 125,000 RWF

10. Future Stability Fund Plan

The group **had aimed to save 40,000 RWF** every month for their Future Stability Fund. Additional profits from business growth are expected to contribute about 10,000 RWF monthly. **(This extra 10,000 comes from the surplus save)**

Month	Total Savings (RWF)
3 months	120,000
6 months	240,000
9 months	360,000
12 months	480,000

Additional savings from surplus income may increase this amount further.

11. Risk Management

Risk	Mitigation Strategy
Low bag demand	Improve designs and expand marketing
Tailor delays	Work with multiple tailors
Waste supply shortage	Partner with restaurants and markets
Market competition	Offer competitive prices and better quality In the future, they can partner with schools, NGOs and many more

12. Conclusion

By clearing their debts, investing in sustainable businesses, controlling their spending, and consistently saving money, the three friends will move from financial instability to financial independence. Within one year they will eliminate debt, secure emergency protection, and build a Future Stability Fund exceeding 480,000 RWF.
